CARE AND CLEANING RECOMMENDATION FOR FLAT-WEAVE CARPETS, SYNTHETIC AND WOOL

Regular care for your carpet is first and foremost the vacuuming.

Vacuum your carpet once or twice a week. Always vacuum flatweave carpet with the plain setting, never the brush!

Regular care includes a thorough cleaning after one or two years depending on the degree of dirtying of the carpet. The cleaning needs to be carried out by a qualified cleaning company.

Textile fibers today have developed so that stain treatment is successful in most cases. It is therefore recommended to possibly immediately treat and remove the stain.

Attempt to remove the stain with lukewarm water. Do not use washing-up liquid or washing powder of any kind as this can intensify the staining of the same area at a later time.

Dab the area with a clean, moist cloth or household tissue.

When 100% Wool:

Attempt with this tried and wellknown home remedy; quickly apply handwarm soapsuds, stains rarely withstand this method.
